

HRS 2000 Imputation Release (Version 2.0)
December 18, 2002

The HRS 2000 Imputation Data Release (Version 2.0) is now available. Based on the 2000 HRS final core data (version 1.0, September 2002), this release supersedes the previous release (Version 1.0, October 2001) of this data.

Compared to the previous version, this release includes for the first time the imputations for Sections DFC, DH, and DTC. It used a slightly modified imputation program that is more consistent with one used for the imputations in other HRS/AHEAD waves.

Please note that although the most extreme outliers were excluded from the imputation process used to fill missing data, they remain in the reported data. Users may wish to review distributions and consider the use of robust statistical procedures to minimize the impact of any outliers on their analyses.

If you find any problems with the data, please report them to us via the Help Desk, or by sending e-mail directly to hrsquest@isr.umich.edu.
