Data Description and Usage

1. Overview

The 2012 HRS Exit (Final, Version 1.0) data release consists of data obtained as part of the Health and Retirement Study (HRS), a national longitudinal study of the economic, health, marital, and family status, as well as public and private support systems, of older Americans. The National Institute on Aging provided funding (NIA U01AG009740), with supplemental support from the Social Security Administration. The Institute for Social Research (ISR) Survey Research Center (SRC) at the University of Michigan conducted the survey.

The current release of the 2012 Exit (Final, Version 1.0) has 1,187 respondents and 1422 variables. An Exit Interview is attempted with a “proxy informant” for panel members who have died. To the greatest extent possible, proxy informants are knowledgeable about the health, family, and financial situation of the deceased (often the proxy is a widow, widower, or some other family member).

The content of the 2012 Exit interview is similar to the 2012 Core (or living) interview. As such, the 2012 Exit data are amenable to answering researchers’ questions concerning medical care, expenditures, how assets are distributed following death, and family decision-making during the latter part of life.

By receiving the data, which have been freely provided, you agree to use them for research and statistical purposes only, and to make no effort to identify the respondents. In addition, you agree to send us a copy of any publications you produce based on the data. See Obtaining the Data for additional details.

1a. The Sample Interviewed in 2012

The data collection period for the 2012 interview was April 2012 through April 2013. The HRS sample is comprised of five sub-samples.

The first sub-sample, the HRS sub-sample, consists of people who were born 1931 through 1941 and were household residents of the conterminous U.S. in the spring 1992, and their spouses or partners at the time of the initial interview in 1992 or at the time of any subsequent interview. The HRS sub-sample was interviewed in 1992 and every two years thereafter.

The AHEAD sub-sample consists of people who were born in 1923 or earlier, were household residents of the conterminous U.S. in the spring 1992, and were still household residents at the time of their first interview in 1993 or 1994, and their spouses or partners at the time of the initial interview or at the time of any subsequent interview. The AHEAD sub-sample was interviewed in 1993-94, 1995-96, 1998 and every two years thereafter.

The War Baby (WB) sub-sample consists of people who were born in 1942 through 1947, were household residents of the conterminous U.S. in the spring 1992, who, at that time, did not have a spouse or partner born before 1924 or between 1931 and 1941, and were still household residents at the time of the first interview in 1998, and their spouses or partners at the time of the initial interview or at the time of any subsequent interview. The War Baby sub-sample was interviewed in 1998 and every two years thereafter.

The Children of the Depression (CODA) sub-sample consists of people who were born in 1924 through 1930, were household residents of the conterminous U.S. when first interviewed in 1998, and who, at that time, did not have a spouse or
partner who was born before 1924 or between 1931 and 1947, and their spouses or partners at the time of the initial interview or at the time of any subsequent interview. The Children of the Depression sub-sample was interviewed in 1998 and every two years thereafter.

The Early Baby Boomer (EBB) sub-sample consists of people who were born in 1948 through 1953, were household residents of the U.S. when first interviewed in 2004, and who, at that time, did not have a spouse or partner who was born before 1948, and their spouses or partners at the time of the initial interview or at the time of any subsequent interview. The Early Baby Boomer sub-sample was interviewed in 2004 and every two years thereafter.

Original sample members are those selected as described above and their spouses or partners at the time of the initial interview in 1992 (HRS), 1993 (AHEAD), 1998 (CODA or WB) or 2004 (EBB). For more details about the sample, see our Web site.

1c. Levels of Files
In the 2012 Exit Questionnaire, most questions were asked of all respondents. In addition to the familiar respondent-level files, the 2012 HRS Exit (Final, Version 1.0), contains files at four other levels: household-member-and-child, helper, transfer-to-child, and transfer-from-child.

1c1. Respondent Level Files
Respondent-level files contain questions that were asked of all proxy respondents about the deceased respondent. The files contain one record for each respondent who provided a 2012 Exit interview via proxy.

1c2. Household Member and Child Level File
This file contains characteristics about household members, children, and siblings. The information comes from the X12PR_MC file, and contains one record for each household member, child, or sibling.
1c3. Helper Level File

This file contains information provided by each exit proxy about the deceased respondent’s helpers. A helper may be a person or organization that was reported by the proxy as providing help with ADLs or IADLs in Section G of the 2012 Exit questionnaire. The helper file X12G_HP contains one record for each helper.

1c4. Transfer-To-Child Level File

This file contains information provided by the exit proxy about transfers of money to children or grandchildren. The file X12E_TC contains one record for each transfer to a child or grandchild. Transfers to children are discussed in Section E – Family Structure and Transfers.

1c5. Transfer-From-Child Level File

This file contains information provided by the exit proxy about transfers of money from children or grandchildren. The file X12E_FC contains one record for each transfer from a child or grandchild. Transfers from children are discussed in Section E of the 2012 interview.

2. File Naming Conventions

Files are named beginning with “X12” for HRS 2012 Exit, followed by a letter (or two) designating the questionnaire section. A separator, “_”, and then one or two letters designating the level will follow the section letter designator.

R for respondent-level,
MC for household-member-and-child-level,
HP for helper-level,
TC for transfer-to-child-level, and
FC for transfer-from-child-level files.

For example, the file X12A_R includes variables from section A (coverscreen) at the respondent level. And file X12E_TC includes variables from section E at the monetary transfer-to-child level.

The following extensions are used for the six different types of files that are distributed.

.DA for data files,
.SAS for SAS program statements,
.SPS for SPSS program statements,
.DO for STATA DO statements,
.DCT for STATA dictionary statements, and
.TXT for codebook files.

One of each of these file types is provided for each of the 16 data files for the 2012 HRS Exit (Final, Version 1.0) data release. For example,

X12A_R.DA contains respondent data from section A,
X12A_R.SAS contains corresponding SAS program statements,
X12A_R.SPS contains corresponding SPSS program statements,
X12A_R.DO contains corresponding STATA DO statements,
X12A_R.DCT contains corresponding STATA dictionary statements, and
X12A_R.TXT contains the ASCII codebook.
3. Data Files

The 2012 HRS Exit (Final, Version 1.0) data are distributed in 16 data files. The files are listed below along with the number of cases (N), number of variables (NV), and the primary identifiers (IDS). The records in the data files are sorted in order by these primary identifiers.

The 2012 HRS Exit data are provided in ASCII format, with fixed-length records. Use associated SAS, SPSS, or STATA program statements to read the data into the analysis package of your choice.

4. Identification Variables

Identification variables for HRS 2012 Final Exit (Version 1.0) are stored in character format.

4a. Primary Identification Variables

Several variables, HHID, XSUBHH, PN, and OPN are used in various combinations to uniquely identify the five different levels that comprise this data release.

4a1. HHID – Household Identification Number

HHID is stable across waves of data collection, and uniquely identifies the original household and any households derived from that household in subsequent waves of data collection. HHID has six digits.

4a2. XSUBHH – 2012 Sub-Household Identifier

In combination with HHID, XSUBHH uniquely identifies a household at the time of the 2012 data collection. Sub-household identifiers can be different at each wave due to dissolution or reconstitution of a household (e.g. divorce,
separation, marriage, or death). XSUBHH has one digit. In the 2012 Exit data, XSUBHH will be either 3 or 4.

4a3. PN – Person Number

In combination with HHID, PN uniquely identifies a respondent. PNs are unique within an original household (HHID). The PN assigned to a particular respondent does not change across waves. PN has three digits.

4a4. OPN – Other Person Number.

In the 2012 data collection HHID, XSUBHH, and OPN uniquely identify another person in the household member and child files; HHID, PN, and OPN uniquely identify another person in the helper files. OPN has three digits.

4b. Primary Identification Variables for Datasets at Each of the Five Levels

Two identifiers uniquely identify records in the

- Respondent level datasets:
  1) HHID  HOUSEHOLD IDENTIFICATION NUMBER
  2) PN    PERSON NUMBER

Three identifiers uniquely identify records in the

- Helper level datasets:
  1) HHID  HOUSEHOLD IDENTIFICATION NUMBER
  2) PN    PERSON NUMBER
  3) OPN   OTHER PERSON NUMBER

Three identifiers uniquely identify records in the

- Household-member-and-child level dataset:
  1) HHID  HOUSEHOLD IDENTIFICATION NUMBER
  2) XSUBHH 2012 SUB-HOUSEHOLD IDENTIFICATION NUMBER
  3) OPN   OTHER PERSON NUMBER

Three identifiers uniquely identify records in the

- Transfer-to-child level and
  - Transfer-from-child level datasets:
    1) HHID  HOUSEHOLD IDENTIFICATION NUMBER
    2) XSUBHH 2012 SUB-HOUSEHOLD IDENTIFICATION NUMBER
    3) OPN   OTHER PERSON NUMBER

4c. Secondary Identification Variables

In addition to the primary identification variables that uniquely identify records in a dataset, secondary identification variables that allow links to other datasets are provided. The secondary identification variables can be used to link the 2012 Exit data with Core data from previous waves, or to link a deceased respondent with data from their surviving spouse or partner.

Secondary Identification Variables for

- Respondent level and
  - Helper level datasets:
1) MSUBHH 2010 SUB-HOUSEHOLD IDENTIFICATION NUMBER
2) NPN_SP 2012 SPOUSE/PARTNER PERSON NUMBER

Secondary Identification Variables for
- Household-member-and-child level,
- Transfer-from-child level and
- Transfer-to-child level datasets:

1) MSUBHH 2010 SUB-HOUSEHOLD IDENTIFICATION NUMBER

5. Distribution Files and Directory Structure

5a. Distribution Files

The files are packaged for download from our Web site in two different ways – as one large .zip file that contains six smaller .zip files and one .pdf file, or the seven smaller files available individually for separate download. The combined file is x12exit.zip.

The individual files for separate download are:

- Data file
  - x12da.zip containing data files.

- Program statement files
  - X12sas.zip containing SAS data descriptors.
  - X12sps.zip containing SPSS data descriptors.
  - X12sta.zip containing STATA data descriptors.

- Documentation files
  - X12cb.zip containing the codebook.
  - H12qn.zip containing the questionnaire.
  - X12dd.pdf - this document.

5b. Directory Structure

While a particular setup is not required for using the 2012 HRS Final Exit files, if the following directory structure is used, then no changes to the path name in the data descriptor files are necessary. If you use a different structure, change the directory references in the distribution files.

</tbody>
</table>

Decompress the selected .zip files into the appropriate subdirectories. You will need about 4.0 MB of free space on your storage device to store the 16 .DA files.

6. Program Statements

Each data file comes with associated SPSS, SAS, or STATA program statements to read the data. Files containing SPSS statements are named with a .SPS extension,
those with SAS statements with a .SAS extension, and those with STATA statements with .DO and .DCT extensions.

The statement files are named beginning with the same prefix as the corresponding data file. For example, SAS statements in the file X12A_R.SAS go with the X12A_R.DA data file.

6a. Using the Files with SAS
In order to create a SAS system file for a particular dataset, two file types must be present:
- .SAS program statement files
- .DA data files.

To create a SAS system file, load the *.SAS file into the SAS Program Editor.

If the *.SAS file is located in "c:\x2012\sas" and the data file is located in "c:\x2012\data", you can run the file as is. A SAS system file (*.SD2 or *.SAS7BDAT) will be saved to the "c:\x2012\sas" directory.

If the files are not located in the specified directories, you will need to edit the *.SAS file to reflect the proper path names prior to running the program.

6b. Using the Files with SPSS
In order to create an SPSS system file for a particular dataset, two file types must be present:
- .SPS program statement files
- .DA data files.

To create an SPSS system file, open the *.SPS file in SPSS as an SPSS Syntax File.

If the *.SPS file is located in "c:\x2012\spss" and the data file is located in "c:\x2012\data", you can run the file as is. An SPSS system file (*.SAV) will be saved to the "c:\x2012\spss" directory.

If the files are not located in the specified directories, you will need to edit the *.SPS file to reflect the proper path names prior to running the file.

6c. Using the Files with STATA
In order to use STATA with a particular dataset, the following three file types must be present:
- .DCT files
- .DO files
- .DA data files.

Files with the suffix .DA contain the raw data for STATA to read. Files with the suffix .DCT are STATA dictionaries used by STATA to describe the data. Files with the suffix .DO are short STATA programs ("do files") which are used to read in the data. Load the .DO file into STATA and then submit it.

If the *.DO and *.DCT files are located in "c:\x2012\stata" and the data file is located in "c:\x2012\data", you can run the .DO file as is.

If the files are not located in these directories, you must edit the *.DO and *.DCT files to reflect the proper path names before running the files.
Note that the variable names provided in the .DCT files are uppercase. If you prefer lower case variable names, you may wish to convert the .DCT files to lower case prior to use. You may do this by reading the .DCT file into a text or word processing program and changing the case. For instance, in Microsoft Word, go to Edit, then Select All, go to Format, Change Case, and select lowercase.

7. Documentation

There are several types of documentation available for use with the 2012 HRS Exit (Final, Version 1.0) data release. These include a codebook, the 2012 box-and-arrow questionnaire, online question concordance and this data description, which includes a list of master codes.

7a. Codebook

The HRS 2012 Exit Codebook is provided as a series of 16 individual ASCII text files, as well as a single file containing all sections. There is a codebook file corresponding to each data file, and a complete codebook that includes all sections. Each variable has its own codebook entry. The format of the codebook is, for the most part, consistent with all previous releases.

7a1. Variable Names

Variable names begin with a letter designating the wave of data collection (X for 2012 Exit), followed by the section letter, and numbers after the section letter. For example, XC030 where X=2012 Exit, C=Section C (physical health), and 030 is the variable number. Variables from the preload section contain either “X” or “Z” as section prefix letters. The “X” section prefix indicates a variable that is updated by data collected in later sections of the questionnaire, whereas the “Z” section prefix indicates preloaded data that were not changed by subsequent answers to questions. For example, XZ077 (PREV WAVE R FIN/FAM TYPE) signifies the Family/Financial Type assigned from the previous wave’s interview, whereas XX007 (RESP FAM/FIN TYPE – UPDATED) indicates the current wave Family/Financial Type, which was updated based on responses in the 2012 interview.

7a1a. Multiple Response and Looped Variables

There are two types of variables with multiple mention indicators. First are simple multiple mentions, and second are multiple mentions within loops.

Simple multiple mention variables take the form: (wave prefix) + (section letter) + (variable number) + (mention number). For example, XC021M1 through XC021M6 are 2012 variables from section C with one through six mentions.

Simple loop variables (without a multiple mention) have an underscore (_) in their name and a suffix that designates the loop, e.g., XN025_1.

Null multiple mention variables and variables from null loops beyond the first mention or first loop are not included in the data. It is generally the case that one null multiple mention and one null loop are retained.

7a1b. Masked Variables

To protect the confidentiality of the information that respondents provide, a number of variables have been masked, or are simply not included in the 2012 Exit Final (Version 1.0) public dataset. Names, addresses, days of birth,
information on geographical relocation, and similar variables are not included in publicly released files. Some of these variables may be made available to analysts as restricted data. See our Web site for details.

Geographical locations are recoded to a level no more detailed than that of the U.S. Census Region and Division. Data on the highest educational degree earned have been further grouped together to increase cell sizes.

The names of variables that were masked for confidentiality end in the letter "M"; for example, variable WX026M (1ST ADDRESS STATE - MASKED). In the 2012 Exit Final Release, the following variables are masked:

7alc. Rules - Conditions

The conditions that allow a respondent to get a question or sequence of questions have been included in the codebook above the variable name and label. However, the programming of the instrument reused blocks of programming for similar sequences (e.g., the questions about people in the household and the pension questions). While these questions are similar, sometimes the conditions to get them or the pattern within the sequence itself are not the same. We have eliminated these discrepancies wherever possible but you will find some rules that should not apply to some sequences here and there.

In addition, there can be inconsistencies when a Respondent decides to go back and change an answer that controls flow. We strongly recommend that you also check the Box and Arrow questionnaire whenever you have a question about flow and whether a respondent should be in a particular sequence.

7b. Box and Arrow Questionnaire

The research community has referred to the type of documentation that describes the questions asked in the interview as a "questionnaire". Since the 2012 HRS Exit data were collected using a CAI program, a traditional hard-copy questionnaire was not produced as part of the data collection phase. However, we have provided a version of the traditional box-and-arrow questionnaire to help document the asking sequence of the questions.
7c. Master Codes
A master code file contains detailed codeframes used in several sections of the codebook. The master codes include health conditions, alphabetical list of health conditions, occupation codes, industry codes, and state and country codeframes. The master codes appear in the Appendix of this document.

7d. Online Question Concordance
This documentation resource lets researchers scan the metadata of publicly released HRS datasets in order to find questions asked in a given wave or waves. It contains one record for each of the questions represented by one or more variables in a specified public file. Concordance records are linked over time only in that they have keywords in common, or appear in similar sections in different years. It is located here: http://hrsonline.isr.umich.edu/concord/index.html.

7e. Cross-Wave Tracker File
The HRS tracker file is created to facilitate the use of HRS data within and across waves. The file contains one record for every person who was ever eligible to be interviewed in any wave. Each record contains basic demographic information, interview status, and if, when and how an interview was conducted in each wave. Also included are cross-sectional weights and information on inter-respondent relationships, which are vital to almost all substantive analyses of the HRS data. Please see the Cross-wave Tracker File Data Description for a more detailed description.

7f. Overview of HRS Public Data Files for Cross-sectional and Longitudinal Analysis
This is a thorough document that provides a description of structure and content for all HRS public data files and a detailed explanation for handling the longitudinal nature of the survey. It is located here: http://hrsonline.isr.umich.edu/sitedocs/dmgt/OverviewofHRSPublicData.pdf

8. Additional Notes
Found here are miscellaneous additional notes regarding HRS 2012 Exit Final Data Release (Version 1.0). If we become aware of additional issues, they will be posted on our Web site in the Data Alerts section.

8a. Unfolding Bracket Variables and Imputations
Typically, a series of unfolding bracket questions follow a lead-in question asking for an amount. If a valid amount was not given, a series of “unfolding” questions were asked. The manner in which the unfolding questions were programmed using Blaise for the 2002 through 2012 surveys is different from the way it was programmed in SurveyCraft for the 1993 through 2000 surveys. This change was transparent to the respondents, since exactly the same questions were asked with the new software; but it did have an implication for the data that were stored and subsequently released.

Instead of storing the response to each unfolding question as was done on waves prior to 2002, three summary variables were generated for HRS 2002 and beyond, a ‘MINIMUM’, a ‘MAXIMUM’, and a ‘RESULT’ variable. The minimum and maximum values are stored based on the answers to the unfolding questions. If the last answer a respondent gave in an unfolding sequence was either “Don’t Know” or “Refused,” that information is stored in the ‘RESULT’ variable. If the Respondent said
“more than” to the unfolding question with the highest value, then the maximum value was stored as 99999996. Greater than Maximum Breakpoint.

For most analysts, those three variables (and in particular, the minimum and maximum of the possible range) will be sufficient for analyses. For any analyst who needs the more detailed information, it should be noted that the three variables, combined with the information about the unfolding questions provided in the box-and-arrow and codebook, are sufficient to allow the analyst to reconstruct the sequence of questions asked of any respondent, and the answers to each of those questions in many of the unfolding sequences.

For other sequences, those in which respondents were randomly assigned to one of three "entry" points for the first unfolding question, the analyst will also need to take into account a fourth variable (located in the preload sections) that specifies the entry point for each respondent. The following example shows the preload variable (XX511) and the unfolding sequence that uses the random entry point from XX511.

8b. Summary of Data Model (DM) Changes During 2012 Production

During the field period, changes to the instrument need to be made in order to correct errors in the programming or to improve the quality of the data. The following is a summary of these changes. In all of the data files there is a variable called, XVDATE, which tells what version of the data model was used to collect a given interview.
