Access and Impact

HRS has always been committed to early and open access to data while protecting the confidentiality of respondents. Support for using this large and complex data set is available through the HRS website, and user workshops are conducted throughout the year. Data dissemination and user outreach efforts have paid off with 14,700 registered researchers worldwide and a rapidly growing number of publications using HRS data.

Acknowledgements

HRS is grateful to the National Institute on Aging of the National Institutes of Health for primary support of this project (U01 AG009740) and to the Social Security Administration for substantial co-funding.

HRS Co-Investigator Team
